

## Project Options are Grayed-Out

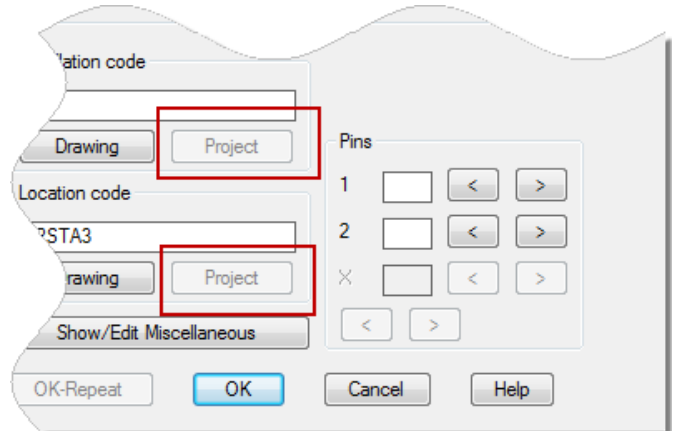

Published Date: 07-09-2009

Applies to: AutoCAD Electrical 2005-2010

### Challenge

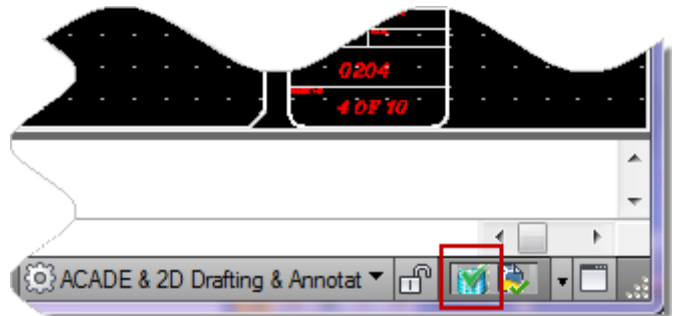

When attempting to perform a project operation, the Project option is not available.

This is caused by working on a drawing from a different project or from a project database error.

### Solution

1. Open your Project Manager and make sure your drawing is part of the active project.
2. Check the Project Database Service Icon in the bottom right corner your program. If the icon has a green check mark it is healthy. If there is a database error that could cause project related problems.

For suggestions on troubleshooting a project database error, Contact KETIV via [support@ketivtech.com](mailto:support@ketivtech.com)
